1 Electrical connection

1.1 Wiring at a glance

Danger of electric shock!

The entire electrical connection work may only be carried out while the device is disconnected from the mains.

Caution

- The protective earth connection must be carried out before any other connection. Danger may occur if the PE wire is interrupted
- Before performing the start-up, make sure that the supply voltage corresponds to the value indicated on the nameplate (right side or back side of casing)
- For the mains line current protection (nominal current $\leq 16\text{ A}$) is required

Note!

Active analogue output; do not connect power (24V DC) on the 0/4-20 mA analogue outputs.

1.2 Terminal layout

terminal	function	type	comment
1	Power-In supply voltage 230VAC	N	internal fuse: 5 AT for Power-Out
2		L	
3		PE	
4	Power-Out supply voltage 230VAC	PE	max. 5 A
5		N	
6		L	
7	relay output 1 (K1)	NC	230 VAC max. 4 A 24 VDC max. 1 A
8		COM	
9		NO	
10	relay output 2 (K2)	NC	230 VAC max. 4 A 24 VDC max. 1 A
11		COM	
12		NO	
13	relay output 3 (K3)	NC	230 VAC max. 4 A 24 VDC max. 1 A
14		COM	
15		NO	
16	analogue output 2*	GND	**jumper between terminal 19 and terminal 39 required for power supply to AO-Modul ***see note chapter 2.1
17		0/4 – 20 mA***	
18			
19		IN 24 VDC**	
20	analogue output 1	GND	***see note chapter 2.1 apparent ohmic resistance max.400 ohm
21		0/4 – 20 mA***	
22	conductivity sensor	Shield	
23		COND A	
24		COND B	
25	temperature sensor	TEMP A	KTY 81-122
26		TEMP B	
27	digital input 1	GND	
28		IN	
29	digital input 2	GND	
30		IN	

* Optional in combination with analogue cartridge (item no. 090041)

1.2.1 Cable specifications

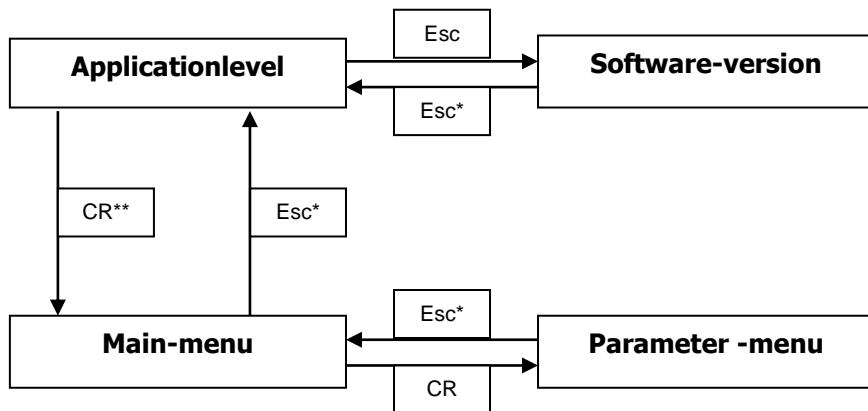

terminals	cable min.	cable max.	cable type
supply voltage	3x1.0 mm ²	3x1.5mm ²	NYM-J/Oilflex 110

1.3 Wiring diagrams

In the appendix you will find examples of the wiring configuration.

2 Handling

2.1 Menu configuration

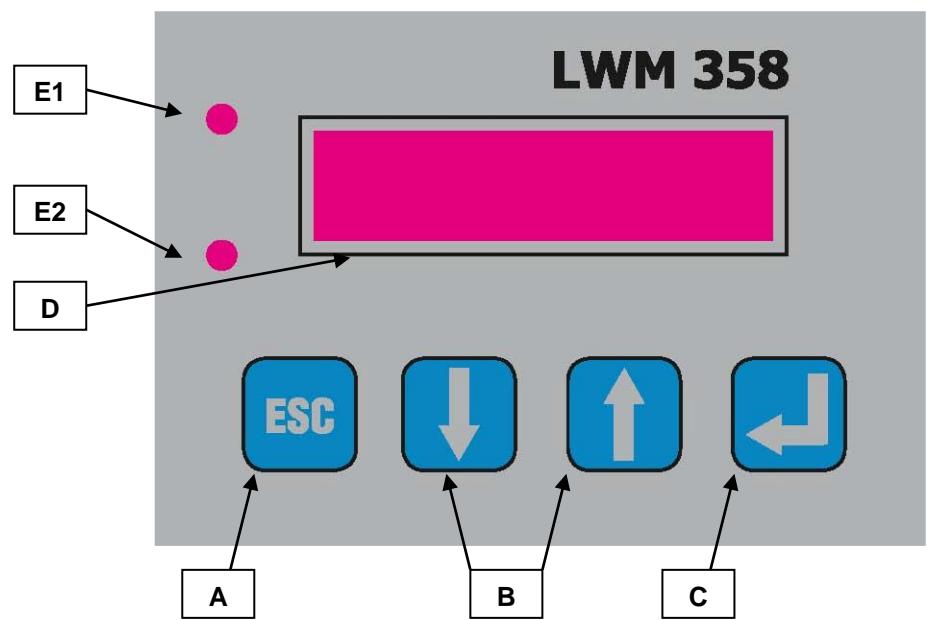

* After 10 minutes without any key activity the menu switches to application level.

** To enter the main menu enter the password (notification _____)

Password 1 2 3 4

In case of entering the wrong password the menu switches to application level.

2.2 Operating elements

	Description	Function
A	ESC	- check out of menues - interruption of entries
B	↓ ↑	- password entry - menu selection - data editing
C	↔	- confirmation of entries - menu request
D	Display	notificaton of: - conductivity and -temperature - status relay K1, K2, K3
E1	LED (gelb)	status digital input 1
E2	LED (gelb)	status digital input 2

2.3 Calibration of Temperature- and Conductivity probes

1. Open menu calibration conductivity, select metering range for the measuring cell ($\rightarrow \mu\text{S}/\text{cm} \leftarrow$)
(Standard measuring cell: up to 100 $\mu\text{S}/\text{cm}$, electrode length 35 mm, MB-resistance 15 $\text{k}\Omega$)
2. Calibration (gauging) of temperature :
 - select „reset gauging” ($^{\circ}\text{C} \rightarrow ? \leftarrow$) in the gauging temperature menu
 - do not modify „lower gauging point” ($\rightarrow \downarrow \leftarrow ^{\circ}\text{C}$)
 - select „higher gauging point” ($\rightarrow \uparrow \leftarrow ^{\circ}\text{C}$) and enter reference value:
 - o put measuring cell in water with temperature ranging from 15 – 20 $^{\circ}\text{C}$,
 - o stir slightly,
 - o await leveling of temperature
 - o take over the value
3. Calibration (gauging) of conductivity:
 - select gauging conductivity menu ($\mu\text{S}/\text{cm}$)
 - select „reset gauging” in the gauging conductivity menu ($\mu\text{S}/\text{cm} \rightarrow ? \leftarrow$)
 - disconnect green or yellow wire for „lower gauging point” ($\rightarrow \downarrow \leftarrow \mu\text{S}/\text{cm}$) (terminal 23 or 24) and enter value „00.0 $\mu\text{S}/\text{cm}$ ”
 - reconnect wiring, select „higher gauging point” ($\rightarrow \uparrow \leftarrow \mu\text{S}/\text{cm}$) and enter reference value:
 - o put measuring cell in water with defined conductivity (approx. 80 % of measuring range)
 - o stir slightly
 - o await leveling of conductivity
 - o take over the value

2.4 Programming of outputs (analogue output):

Programming the analogue output:

- select menu item A01 0 / 4-20 mA in the menu
- in menu item A01 0 / 4-20 mA set analog signal output to 0-20 or 4-20 mA
- assign the lower measuring range of the measuring cell (0/4 mA =),
e.g. 4mA = 0.1 $\mu\text{S}/\text{cm}$
- assign the upper measuring range of the measuring cell (20 mA =),
e.g. 20mA = 200.0 $\mu\text{S}/\text{cm}$
- the assigned $\mu\text{S}/\text{cm}$ values must not exceed the measuring range of the measuring cell
- counter-check the given mA values after programming in the diagnosis menu, use an external current meter for this purpose

Calibration of analogue output:

- If the given mA values differ, the analogue output can be calibrated
- In relation to the set range of the measuring cell 0-20mA or 4-20 mA the output for the lower value is 0 or 4 mA. If there is a deviation between the value of the current meter and the LWM the lower point of calibration needs to be set in the LWM. ($\rightarrow \downarrow \leftarrow \text{mA}$)

- For calibration the output of the upper value is 20 mA. If there is a deviation between the value of the current meter and the LWM the upper point of calibration needs to be set in the LWM. ($\rightarrow\uparrow\leftarrow$ mA)
- The shown values for calibration points are the results from the last calibration
- Conduct calibration always completely, first "low" then "high"
- Calibration process must not be interrupted (with ESC-button)
- It is not possible to check calibration values without automatic saving!

Accuracy is at 1% after calibration

relay output K1-K2-K3

DI1/DI2 activation of threshold value via digital input

Activate/ deactivate the relay outputs for monitoring of threshold values, for instance when a pump or solenoid valve is activated etc.

3 Parameters and settings

parameter	function	format/ unit	selection/ limit	default setting	individual setting
K1					
$\mu\text{S}/\text{cm} \leftrightarrow ^\circ\text{C}$	select monitored parameter		$\mu\text{S}/\text{cm}$ $^\circ\text{C}$	$\mu\text{S}/\text{cm}$	
\uparrow	max.-limit		metering range*	MB-final value	
\downarrow	min.-limit		metering range*	MB-starting value	
$t\uparrow$	time lag Max.-limit	s	0 - 999	0	
$t\downarrow$	time lag Min.-limit	s	0 - 999	0	
DI1	limit activation by digital input 1		\uparrow - \downarrow	-	
DI2	limit activation by digital input 2		\uparrow - \downarrow	-	
K2					
$\mu\text{S}/\text{cm} \leftrightarrow ^\circ\text{C}$	select monitored parameter		$\mu\text{S}/\text{cm}$ $^\circ\text{C}$	$\mu\text{S}/\text{cm}$	
\uparrow	max.-limit		metering range*	MB-final value	
\downarrow	min.-limit		metering range*	MB-starting value	
$t\uparrow$	time lag Max.-limit	s	0 - 999	0	
$t\downarrow$	time lag Min.-limit	s	0 - 999	0	
DI1	limit activation by digital input 1		\uparrow - \downarrow	-	
DI2	limit activation by digital input 2		\uparrow - \downarrow	-	
K3					
$\mu\text{S}/\text{cm} \leftrightarrow ^\circ\text{C}$	select monitored parameter		$\mu\text{S}/\text{cm}$ $^\circ\text{C}$	$\mu\text{S}/\text{cm}$	
\uparrow	max.-limit		metering range*	MB-final value	
\downarrow	min.-limit		metering range*	MB-starting value	
$t\uparrow$	time lag Max.-limit	s	0 - 999	0	
$t\downarrow$	time lag Min.-limit	s	0 - 999	0	
DI1	limit activation by digital input 1		\uparrow - \downarrow	-	
DI2	limit activation by digital input 2		\uparrow - \downarrow	-	

parameter	function	format/ unit	selection/ limit	default setting	individual setting
